

Introducing...

HYDR**PRO**

Blending science with *nature*

ENDURING HYDRATION WITH LONG RESIDUAL ACTIVITY

Complete solution for all
your greenhouse and
nursery crops.

HYDRPRO**** ranks as one of the most
advanced wetting agents available on
the market and is leading the way in
water conservation products.

HYDRPRO**** is able to provide
the highest concentration
of actives and comes in
both liquid and granular
forms. HydroPro is easily applied
directly whilst watering, added as a
topdress, or readily incorporated
into soil mixes. A unique blend of
polymers
suited for use
with nursery
stock,
perennials,
pot and
bedding
plants.

PROFICIENT
DUAL-ACTION
WETTING
AGENT

Made in Australia to successfully counter weather extremes and overcome hydrophobic soil conditions for impressive nursery results.

VISIBLE RESULTS

- Improves plant growth and performance
- Increases plant uniformity; ensures deeper, stronger roots
- Inhibits the growth of moss, algae and soil-borne disease microbes
- Eliminates occurrence of localised dry spots and perched water tables in the pot
- Helps prevent wilting during both establishment and post establishment phases

PRODUCT BENEFITS

- Reduces surface tension
- Decreases irrigation requirements
- Watering infiltrates the root zone of container crops
- Draining saturated soils as well as re-wetting dry soils (dual-action)
- Able to improve performance of fertilisers and pesticides

PROFICIENT DUAL-ACTION WETTING AGENT

FLEXIBILITY

- Can be used in conjunction with fertilisers and pesticides
- Works quickly and effectively with all media types
- Concentrated product for lower application rates

APPLICATION RATE FOR GENERAL NURSERY AND GREENHOUSE POTTING MIXES

- Incorporate at the rate of 1kg granules per cubic metre of soil

Please refer to ultranaturals website for detailed application rates for both the granules and liquid concentrate, including application rates for propagation and plug potting mixes.
